

## **LE Delivers Product for Distributed Power Generation Market**

**January 8<sup>th</sup> 2001, Campbell, CA** — Light Engineering (LE), a developer of amorphous metal rotating machines for the automotive and alternative energy technologies, confirmed today that it has completed and shipped a product solution for a leading power generation company.

"Distributive energy services made available through recent innovations signal a bright future for Light Engineering," said Dr. Bob Pressley, CEO of LE. "We have logically and systematically constructed a business model and assembled products that directly impact performance requirements while remaining sensitive to the early stages of market commercialization. Our platform for development is to provide leading distributive power generation manufacturers a robust tool set enabling them to more economically manufacture products that generate plentiful, reliable, and high-quality electricity," Dr. Pressley went on to say.

"There are many exciting projects on the table at Light Engineering, but few are as important as refining our product suite for the distributive power industry," said Matt Johnston, President of LE. We are acutely aware of the attention devoted to this industry by consumers and investors alike. The confluence of public demand, need for technological advancements, and big investment opportunity continues to fuel our growth and sharpen our vision," Matt continued.

*LE has developed and markets the industry's leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.*
