

## LE Announces Next Generation Power Product

**September 14<sup>th</sup> 2001, Morgan Hill, CA** – Light Engineering (LE) announced today that it is near completion of the next generation of its Distributed Power Technology product offering for an OEM power generation client. “LE’s new 85kW class generator will lead the way to further power generation products benefiting from the LE/Honeywell solution. Our industry-leading power density, efficiency, and cost management will certainly bring Light Engineering to the forefront of the marketplace,” said Dr. Bob Fagan, Vice President of Engineering & Development for LE.

*LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.*
