

## **LE Announces Standard Product Line Release at PowerGen 2002**

**December 12<sup>th</sup> 2002, Orlando, FL** – Light Engineering (LE) announced today the introduction of a standard line of power generation products. The first in a series of “GenSmart™” products was on display during the International PowerGen Expo in Orlando. “These initial three products enable LE to offer “off-the-shelf” machines to the marketplace. During 2003 LE will expand from these initial products into a complete product line covering the 5 – 125 kW range,” said Mathew Johnston, President/CEO of LE.”

“The demand for technology demonstration has been very high, with many prospective clients desiring to test our machines. By introducing a standard line of products, LE can now rapidly satisfy the technology demonstration phase and move clients into OEM applications more quickly,” said Jeffery Day, VP of Business Development.

Mr. Day went on to say: “This introduction, combined with the contracts currently in place for alternators, traction drives, and Auxiliary Power Units (APUs), ensures LE of significant production revenue growth in 2003.”

*LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.*
