

## **LE Announces Follow-Up on Orders for Military Applications**

**November 28<sup>th</sup> 2003, Indianapolis, IN** – Light Engineering (LE), a producer of high power density rotating machines, announced today it has received multiple follow-up orders from two separate OEM producers for the US Military. LE has previously announced sales of rotating machines into various government sponsored technology development programs. The subject products are an integrated wheel motor system as well as a highly portable power generation system.

“These follow-up orders from our customers represent the needed initial success to propel such government programs into production. The LE technology yields such significant reductions in size, weight and cost that the program benefits speak for themselves. We’re very happy to be selected to continue the projects with these clients,” said Matt Johnston, CEO of LE.

*LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.*
