

LE Announces New Integrated Power Systems Products & Partnership with Cummins Mid-State

December 8th 2003, Indianapolis, IN – Light Engineering (LE) announced today the release of three new products at the International PowerGen show. These new products integrate the high power density LE GenSmart™ products with various OEM engine products. LE further announced a new manufacturing and sales relationship for the production of these integrated systems with Cummins Mid-State of Indianapolis. Under this new partnership, integrated PowerGen systems will be available and produced via Cummins Mid-State.

“LE and Cummins Mid-State have been working extensively for many months in collaboration on these products. The new 5, 15, & 50kW platforms enable LE to advance its product offerings to the power generation marketplace. The product interest has been substantial and LE is very pleased with acceptance by our customers,” said Mathew Johnston, LE’s CEO.

With this product release, customers can now access LE technology in an integrated system solution from Cummins Mid-State. The systems are available in a wide configuration of voltage/speed, engine type and make.

LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.
