

Light Engineering Announces Asia Initiative

June 10th 2006, Indianapolis, IN – Light Engineering (LE) announced today that it has embarked upon a sales & business development effort in Asia, with particular focus in China. LE plans to develop product manufacturing capabilities as well as product sales and marketing for the technology in Asia. “LE has been active in Japan for over four years now, our business continues to do well there, and we have always had a China path in our overall corporate roadmap” said Mathew Johnston, President-CEO of LE. “The Asia region is becoming very aware of power and energy costs; it’s not just an issue for the USA and Europe. LE’s rotating machine technology delivers very strong value in motors and generators, and we see Asia as a necessary step towards our further success. We encourage everyone to keep an eye out for future releases on this topic,” said Mr. Johnston.

LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.
