

Light Engineering Displays their Vehicle Traction Drive Solutions at EVS-23

December 1st 2007, Anaheim, CA – Light Engineering (LE), an innovator in the motor and power generation marketplace, announced today it will be displaying its vehicle traction drive and charging system solutions during the EVS-23 conference in Anaheim, CA. EVS-23 will have the largest gathering of professionals in the electric vehicle transportation industry anywhere in the world.

“LE is very pleased to again be participating in EVS. This being our third year, it’s amazing to see the great progress the industry has made in EV–HEV technology development and commercialization,” said Mathew Johnston, CEO of Light Engineering. “While the worldwide marketplace is less commercially developed in this area when measured against worldwide production, it is certainly the fastest growing segment in automotive technology, and is quickly moving to the forefront. LE is committed to success in this marketplace, and EVS has allowed us to establish this. One only need look at the great roster of companies here at EVS and their commitment to this market success.”

“EVS represents the ‘world’s stage’ for the various technologies and applications in the EV-HEV industry,” continued Mr. Johnston. “It’s continued commitment and growth that is the testimony to the entire market. We’re very pleased to participate in EVS-23, and will continue to do so well into the future.”

LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.
