

Light Engineering Speaks at Power Gen International

December 11th 2007, New Orleans, LA – Light Engineering (LE) will be speaking at Power Gen on the advantages of the LE GenSmart™ enabled Variable Speed Power Generation system. Power Gen International (New Orleans, LA) will have the largest gathering of professionals in the Power Gen industry.

“LE is thrilled with the market acceptance of our variable speed generators for mobile applications,” said Andrew Hirzel, Chief Technology Officer of LE. “We are looking forward to a fantastic show.”

LE has developed and markets the industry’s leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.
