

LE Introduces New Revision of Light Tower

May 8th 2008, Indianapolis, IN – Light Engineering (LE), an innovative technology company in the motor and power generation marketplace, announced today a new revision of their LT 30-30™ light tower unit. The revised light tower will be assembled in the USA. The new unit contains lights that provide better luminosity than previous versions. This revision also includes a Yanmar engine model 2TNV70. The benefit to this model engine is twofold. It is a more compact engine that has outstanding fuel efficiency, and at the same time has improved noise reduction.

“We are very pleased to be working with Yanmar,” said Steve Stover, VP of LE. “These engines have greatly improved the overall performance of our already fuel efficient light tower units.”

In 2007, LE announced availability of the LT 30-30™, offering commercial construction corporations the unique opportunity to reduce light tower fuel consumption and maintenance expense with revolutionary GenSmart™ technology. With more than *30% less fuel consumption* and *30% longer run time*, the LT 30-30™ offers operating efficiency improvements that can reduce typical fleet operating expenses by \$270,000 per year for a fleet of 100 light towers!

About LE

LE has developed and markets the industry's leading rotating machine technology for permanent magnet motors and generators. Our technology enables the LE GenSmart™ generators and SmartTorq™ motors that LE commercially sells today, and also is the building block for various new applications to come. The application of LE technology allows for greatly reduced machine sizes and active material contents, and thus has proven to be the cost leader in permanent magnet applications of 2 – 200 kW. LE is headquartered in Indianapolis, Indiana, USA, and has manufacturing operations in the Guangdong Province of China.
